**The Book of L. G.** Rozenberg 2012-12-06 This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been used to model biological systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

**Human Security** W.E. Blatz 1966-12-15 During his lifetime, W.E. Blatz was so much occupied with the development of the University of Toronto's Institute of Child Study that he was able to devote little time to writing. This is his first book to appear in twenty-one years, and his first complete exposition of his famous Theory of Security. The Theory of Security is radically different from the theories promulgated by Freudian psychologists. Whereas Freudian personality theory is based on the notion of unconscious, an entity that is only indirectly observable, the Theory of Security derives from the observation of the conscious state in all its manifestations. Dr. Blatz thus makes use of both empirical observations and the results of introspection, and, as might be expected, some of his conclusions run counter to those reached in much current psychological discussion. But proof of the forcible influence of the theory and its author may be found in the impressive number of books and articles already published by Dr. Blatz's associates at the Institute of Child Study, applying the theory to the practical problems of psychological observation and therapy. It is fitting that the man whose work has generated so much fruitful research by others in this field should at last have set down in book form the fundamental principles that guided them.

**Animal Models in Eye Research** Panagiotis A. Tsionis 2008 The eye is a complex sensory organ, which enables visual perception of the world. Thus the eye has several tissues that do different tasks. One of the most basic aspects of eye function is the sensitivity of cones to light and its transduction through the optic nerve to the brain. Different organisms use different ways to achieve these tasks. In this sense, eye function becomes a very important evolutionary aspect as well. This book presents the different animal models that are commonly used for eye research and their uniqueness in evaluating different aspects of eye development, evolution, physiology and disease. \* Presents information on the major animal models used in eye research including invertebrates and vertebrates \* Provides researchers with information needed to choose between model organisms \* Includes an introductory chapter on the different types of eyes, stressing possible common molecular machinery

Cities at War Mary Kaldor 2020-03-31 Warfare in the twenty-first century goes well beyond conventional armies and nation-states. In a world of diffuse conflicts taking place across sprawling cities, war has become fragmented and uneven to match its settings. Yet the analysis of failed states, civil war, and state building rarely considers the city, rather than the country, as the terrain of battle. In Cities at War, Mary Kaldor and Saskia Sassen assemble an international team of scholars to examine cities as sites of contemporary warfare and insecurity. Reflecting Kaldor's expertise on security cultures and Sassen's perspective on cities and their geographies, they develop new insight into how cities and their residents encounter instability and conflict, as well as the ways in which urban forms provide possibilities for countering violence. Through a series of case studies of cities including Baghdad, Bogotá, Ciudad Juárez, Kabul, and Karachi, the book reveals the unequal distribution of insecurity as well as how urban capabilities might offer resistance and hope. Through analyses of how contemporary forms of identity, inequality, and segregation interact with the built environment, Cities at War explains why and how political violence has become increasingly urbanized. It also points toward the capacity of the city to shape a different kind of urban subjectivity that can serve as a foundation for a more peaceful and equitable future.

Die Historie Von Der Schönen Lau / The Story of the Beautiful Lau Eduard Mörike 2015-07-01 Text in English & German. The beautiful Lau, the heroine of Eduard Mörike's story, is only half a water spirit -- her mother was a human woman, and her father was a water nix of royal blood. She has thin webs between her toes, but apart from this she is not externally different to a human being. Because she cannot laugh and can bear only dead children, her husband, the Donaunix, sends her to the Blautopf lake. Before she can be permitted to return, she must laugh five times. The Blautopf is located in Blaubeuren, and is the source of the river Blau. It is a "pot spring", and connected to a cave system that was first studied in the 1950s. One of the great caverns discovered by explorers -- the so-called "Mörike-Dom" -- is 25 m wide, 30 m high and 125 m long. The spring waters are deep blue in colour, and change from turquoise blue to dark blue as the light shifts -- on overcast days, the water actually appears to be almost black. During Germany's Romantic period, the Blautopf gave rise to all kinds of speculations and stories, and Mörike, one of the most prominent exponents of Swabia's group of Romantic poets, who spent a night in Blaubeuren during a journey in 1840, took his inspiration from this striking place.
