At the Bottom of Indian Society Stephen Fuchs 1981 Description: In recent years the harijan problem has become very prominent in india's social and political life. The problem of caste and untouchability has been discussed from various viewpoints always with due impartiality and a thorough knowledge of the facts. It gives a new explanation for the origin of untouchability, dating it back to the pre-indian past of the aryaans and dravidians. It contributes greatly to a better understanding of the harijans by a short description and characterisation of all the individual harijan castes throughout india. Such a study had never been undertaken before. This study of the harijans has enabled the author to arrive at new conclusions rarely mentioned in the literature on caste and untouchability: 1. The problem of untouchability originated among the high-castes. Therefore, for the abolition of untouchability, the high-castes must be tackled first. They must be convinced that untouchability is to their own economic and social disadvantage. So far reformers have attacked the problem at the wrong end: by trying to uplift the harijans. No wonder they failed. 2. The indian high-castes are not consistent in linking untouchability with certain impure occupations. The stigma of untouchability is attached to certain trades in one region while in other regions workers in the same trade are not excluded from the hindu fold. 3. Various trades, ritually impure, are closely connected in indian economy. This explains why certain trades, though apparently ritually impure, can be carried out only by untouchables. The conclusions presented in the present book may have important practical implications for the abolition of untouchability and thus for the solution of a national problem which causes so much suffering.

Embryology of Angiosperms B. M. Johri 2012-12-06 Thirty-four years have elapsed since the publication of the late Professor P. Maheshwari's text, An Introduction to the Embryology of Angiosperms, a work which for many years has been an invaluable guide for students and a rich source book for research workers. Various texts dealing with sections of a broad spectrum of topics encompassed by Maheshwari in his book have appeared in the interim, but a comprehensive work dealing with the whole field has been lacking. This present volume splendidly meets the need, and it is altogether fitting that Professor B. M. Johri, long an associate and close colleague of Professor Maheshwari and himself a prolific contributor to the subject, should have undertaken the task of editing it. When Maheshwari wrote, it was still feasible for one person to handle the subject, but today even someone with his fine breadth of vision and depth of understanding could not do so in justice. So the effort has to be a collaborative one; and Professor Johri's achievement has been to bring together a number of authoritative collaborators, assign them their responsibilities, and put them to work to produce a text as integrated and comprehensive as the diversity of the subject would allow. The product vividly illustrates the advances that have been made in the study of angiosperm reproductive systems in the last 30 years, and the book is surely destined to become the most

student and researcher alike.
